

On our website, for all transactions, we use the MetaMask crypto wallet.

MetaMask can be installed on both a computer and a mobile phone. On a mobile phone it is installed as a regular application, and on a computer as a browser extension.

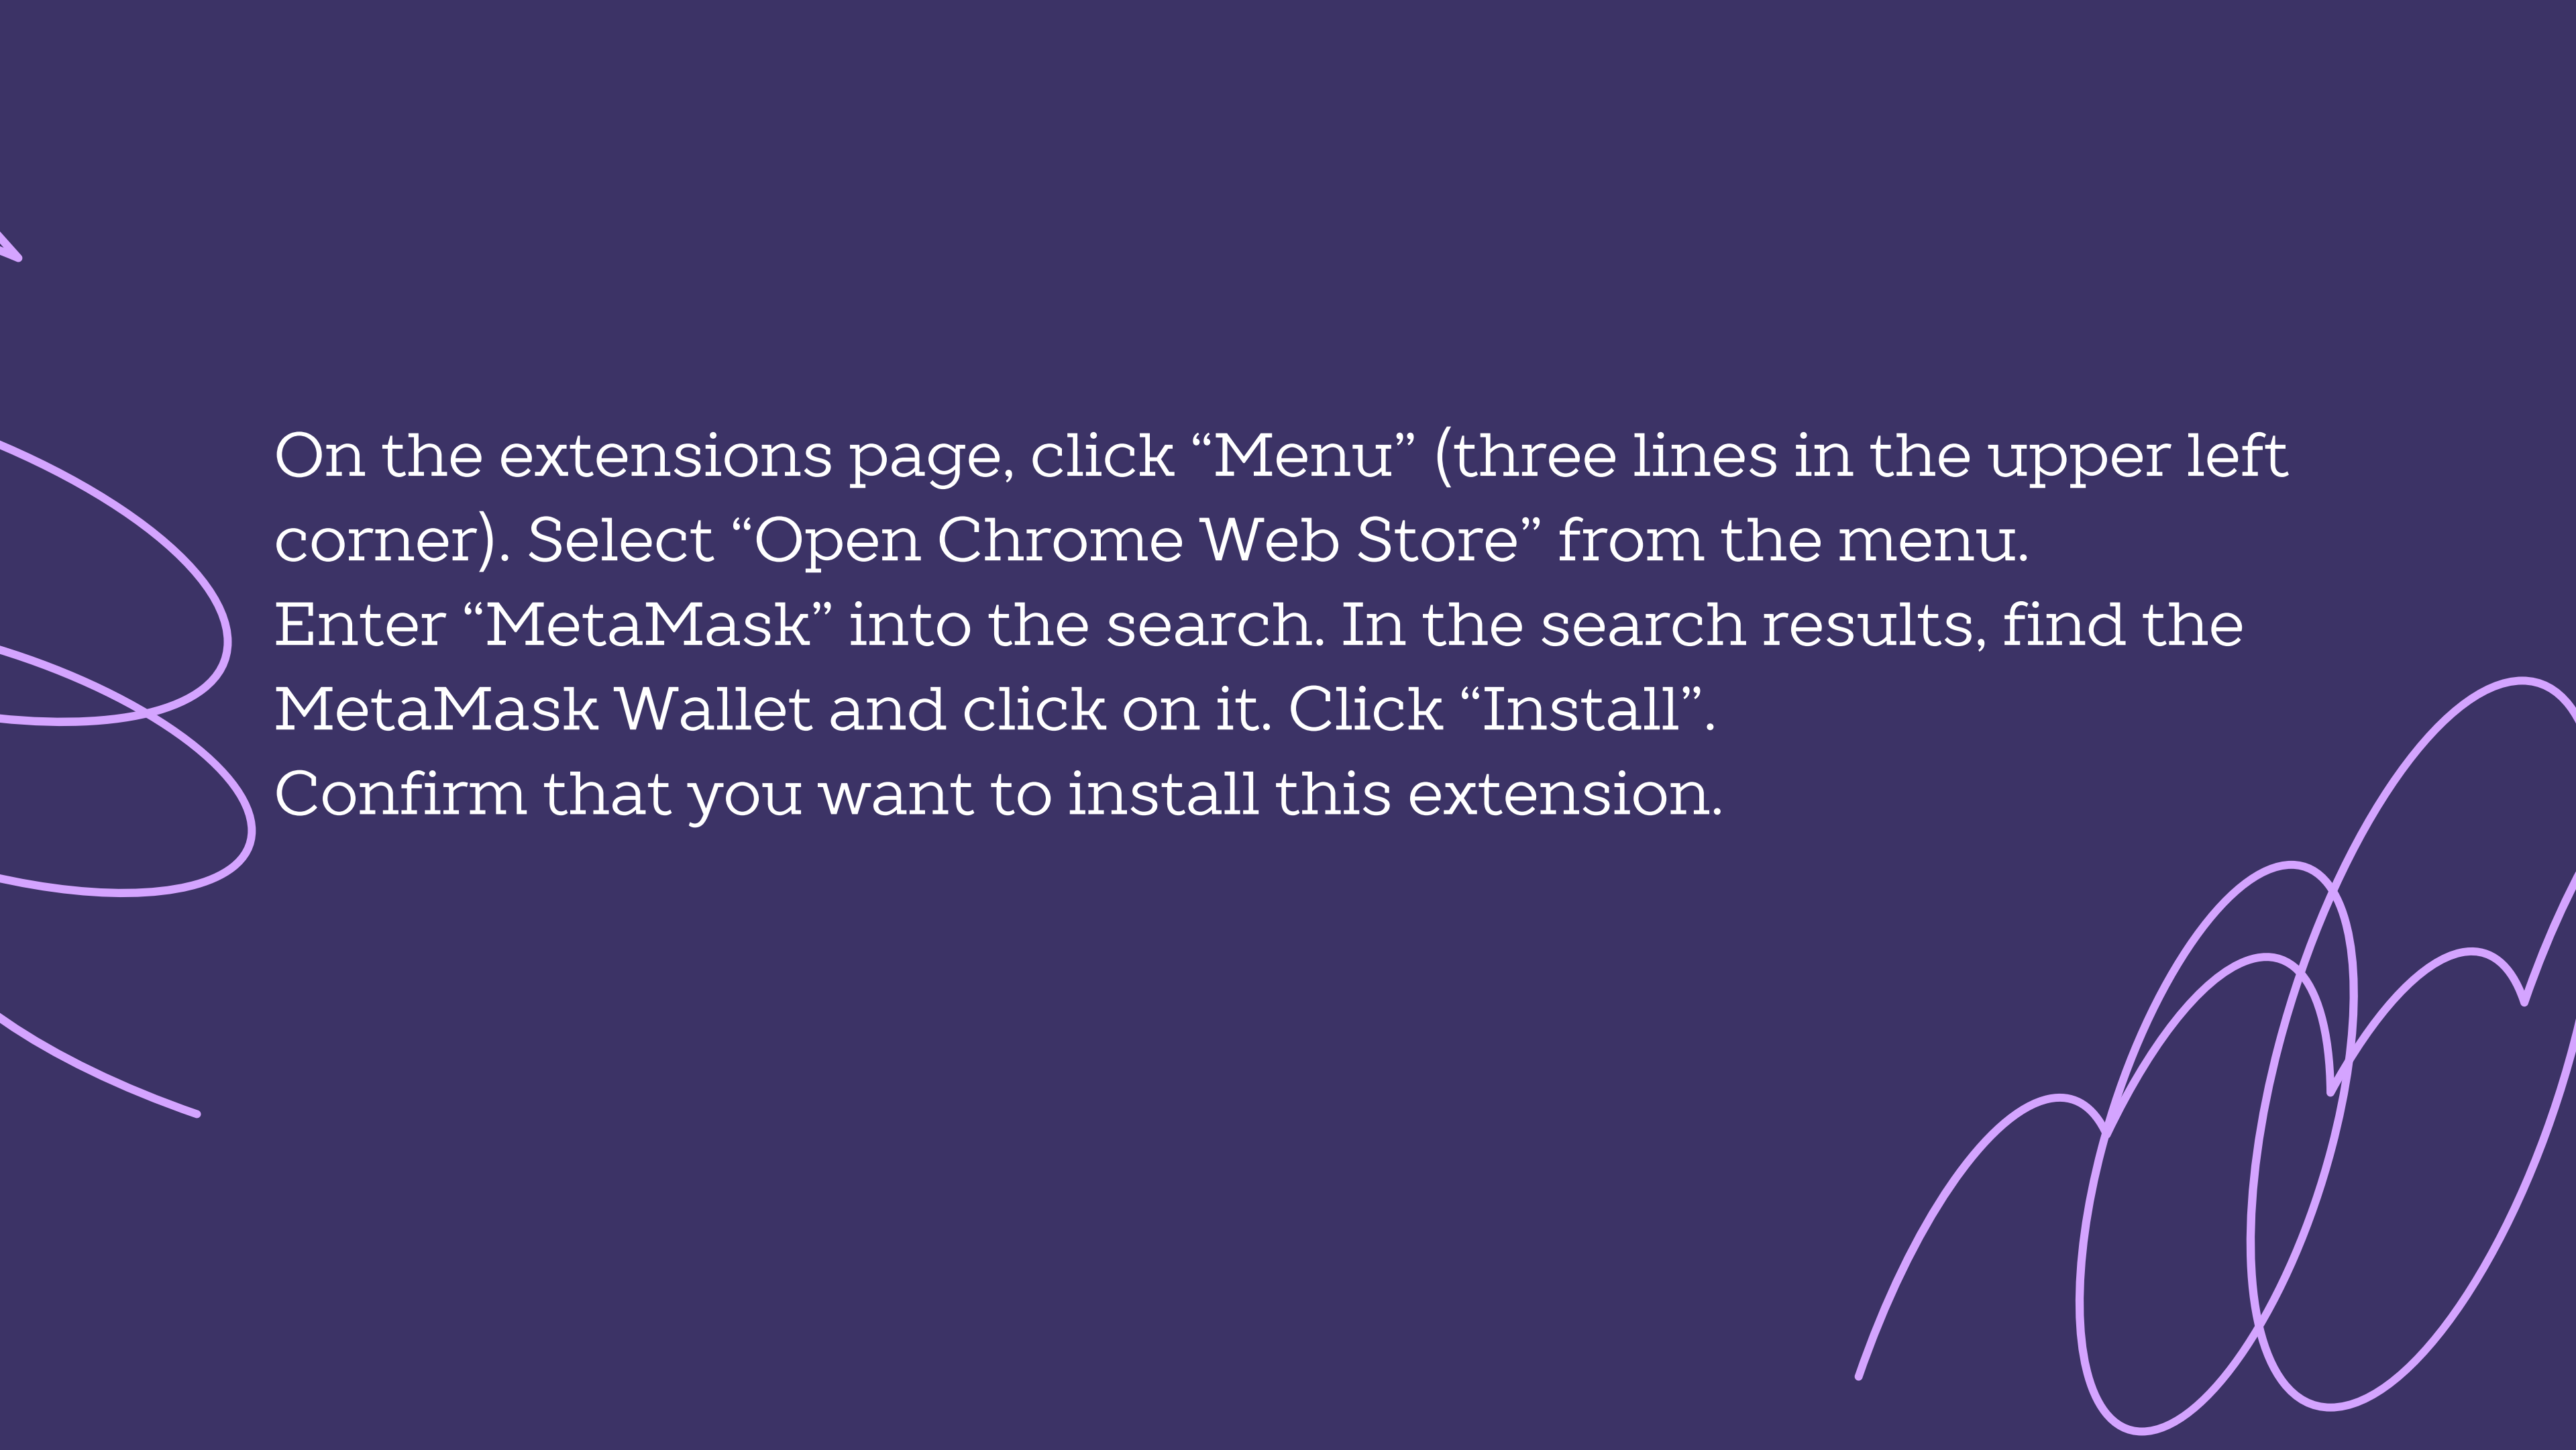

Metamask only works with Google Chrome, Firefox and Brave browsers.

To install MetaMask, in the Google Chrome browser, in a new tab on the browser panel, click the “Extensions” icon – “Manage extensions” or click on the “Menu” button (these are three dots on the right) – “Additional tools” – “Extensions”.

On the extensions page, click “Menu” (three lines in the upper left corner). Select “Open Chrome Web Store” from the menu. Enter “MetaMask” into the search. In the search results, find the MetaMask Wallet and click on it. Click “Install”. Confirm that you want to install this extension.

The extension opens in a new tab. Click – “Get Started”, then – “Create a wallet”. We agree to the terms. Create and repeat a password. We tick the box that we have read the terms and conditions and click “Create”. Watch the video about the secret phrase and ways to restore your wallet and click “Next”. Click on the field with the phrase, rewrite it and click “Next”. Click on the words below to paste them into the box above in the order in which they were written on the previous page.

When all the words are selected, click “Confirm”. Read the safety recommendations and click “All done.”

After installing the wallet, you need to connect the “Binance Smart Chain” network to MetaMask. To do this, open the drop-down menu with the name of the network. Click – “Add network”.

Fill in the fields using this data:

Network name: Binance Smart Chain

New RPC URL: <https://bsc-dataseed.binance.org/>

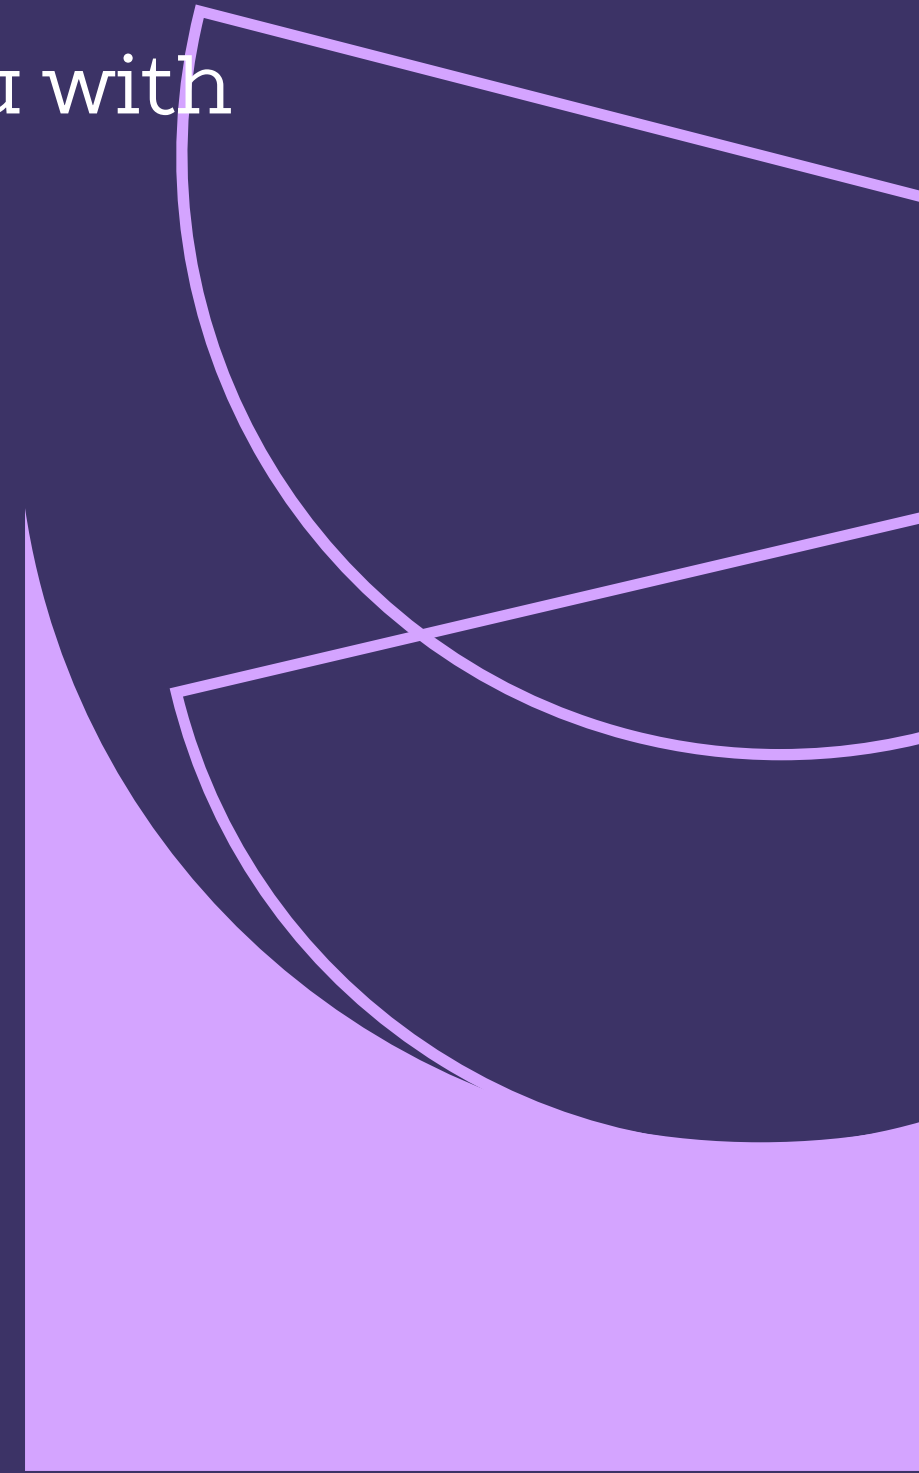

Chain ID: 56

Currency symbol: BNB

Block Explorer URL: <https://bscscan.com>

Click “Save”.

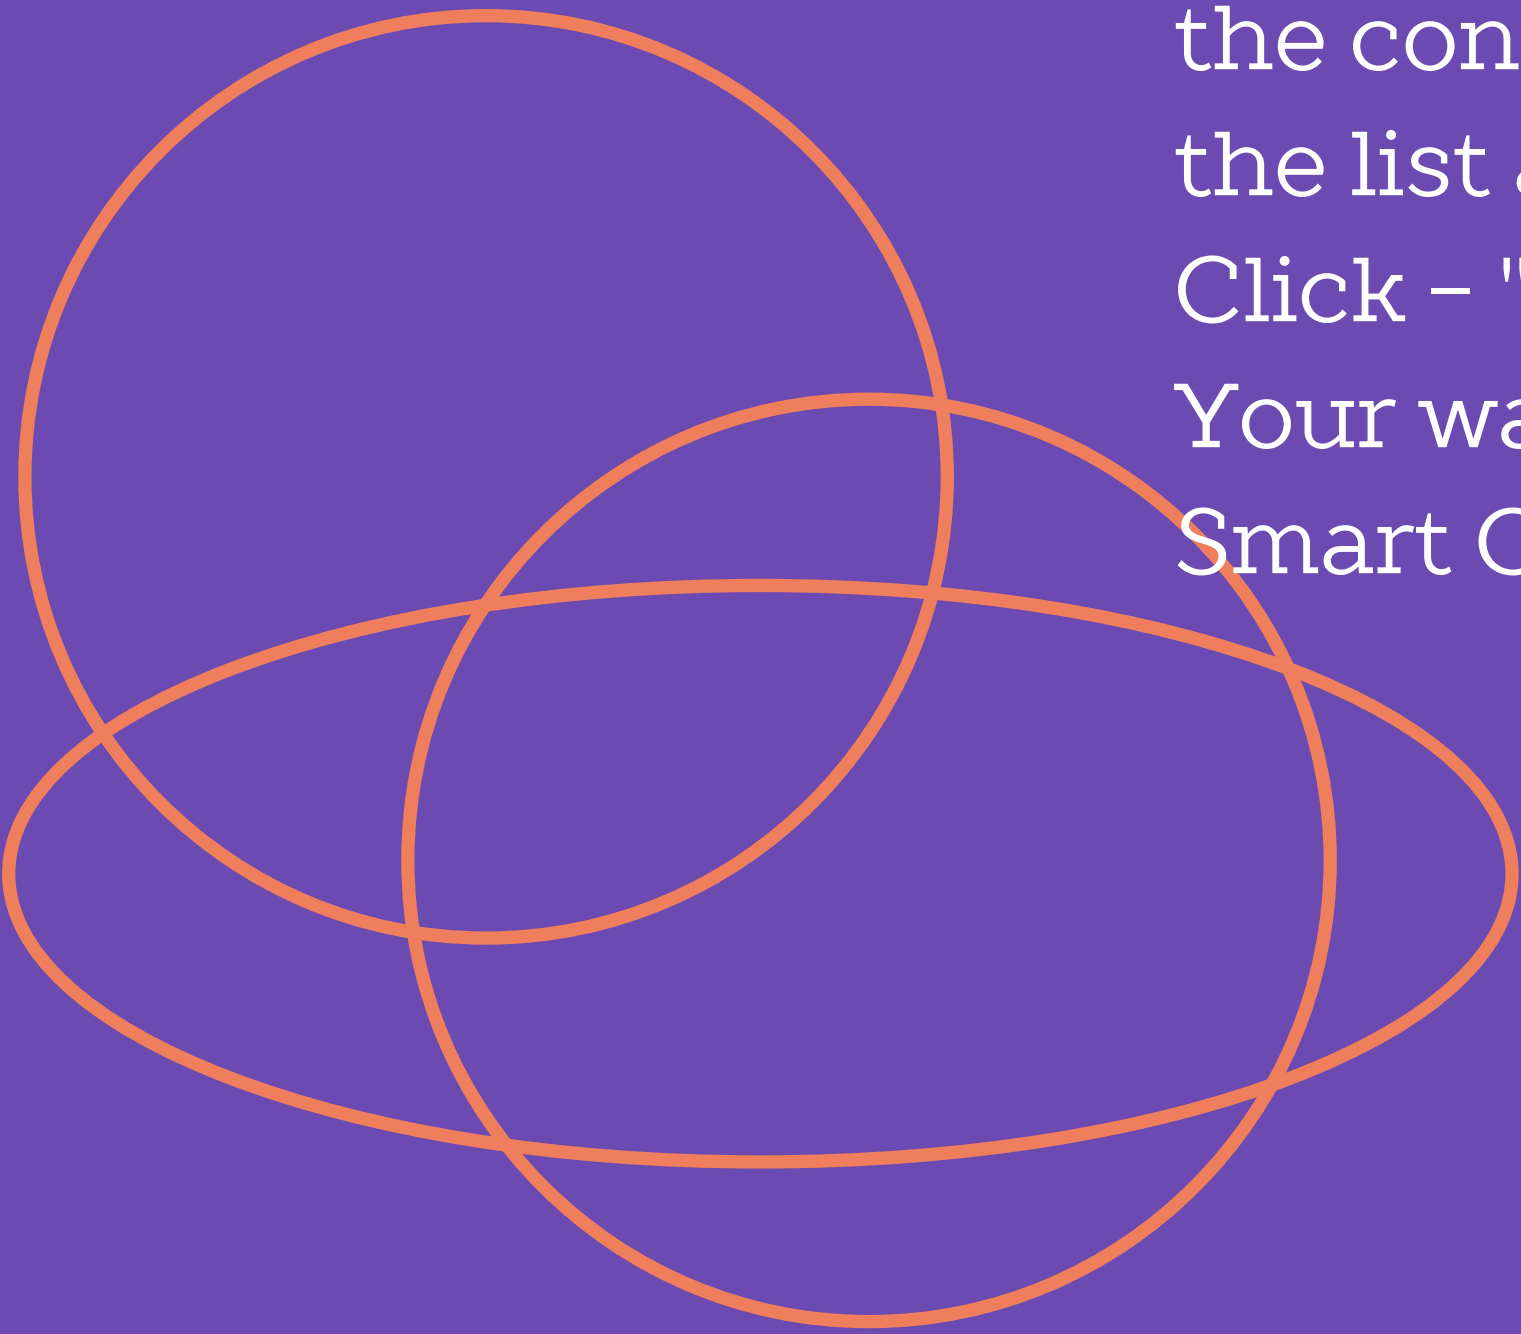

We see that we have a BNB token, and the name of the network has changed to Smart Chain.

To add USDT, go to <https://coinmarketcap.com/>
Enter USDT into the search bar. Select a token from
the list that appears.

Find the field - "Contracts" and click - "More". Find
the contract for the Binance Smart Chain network in
the list and click on the MetaMask icon on the right.
Click - "Add token".

Your wallet can now handle USDT on the Binance
Smart Chain.

How to top up your MetaMask wallet.

The most popular way is to use exchangers.

Go to the website www.bestchange.com This is an aggregator of currency and cryptocurrency exchangers. He monitors many exchangers on the Internet and recommends the most reliable ones to his users.

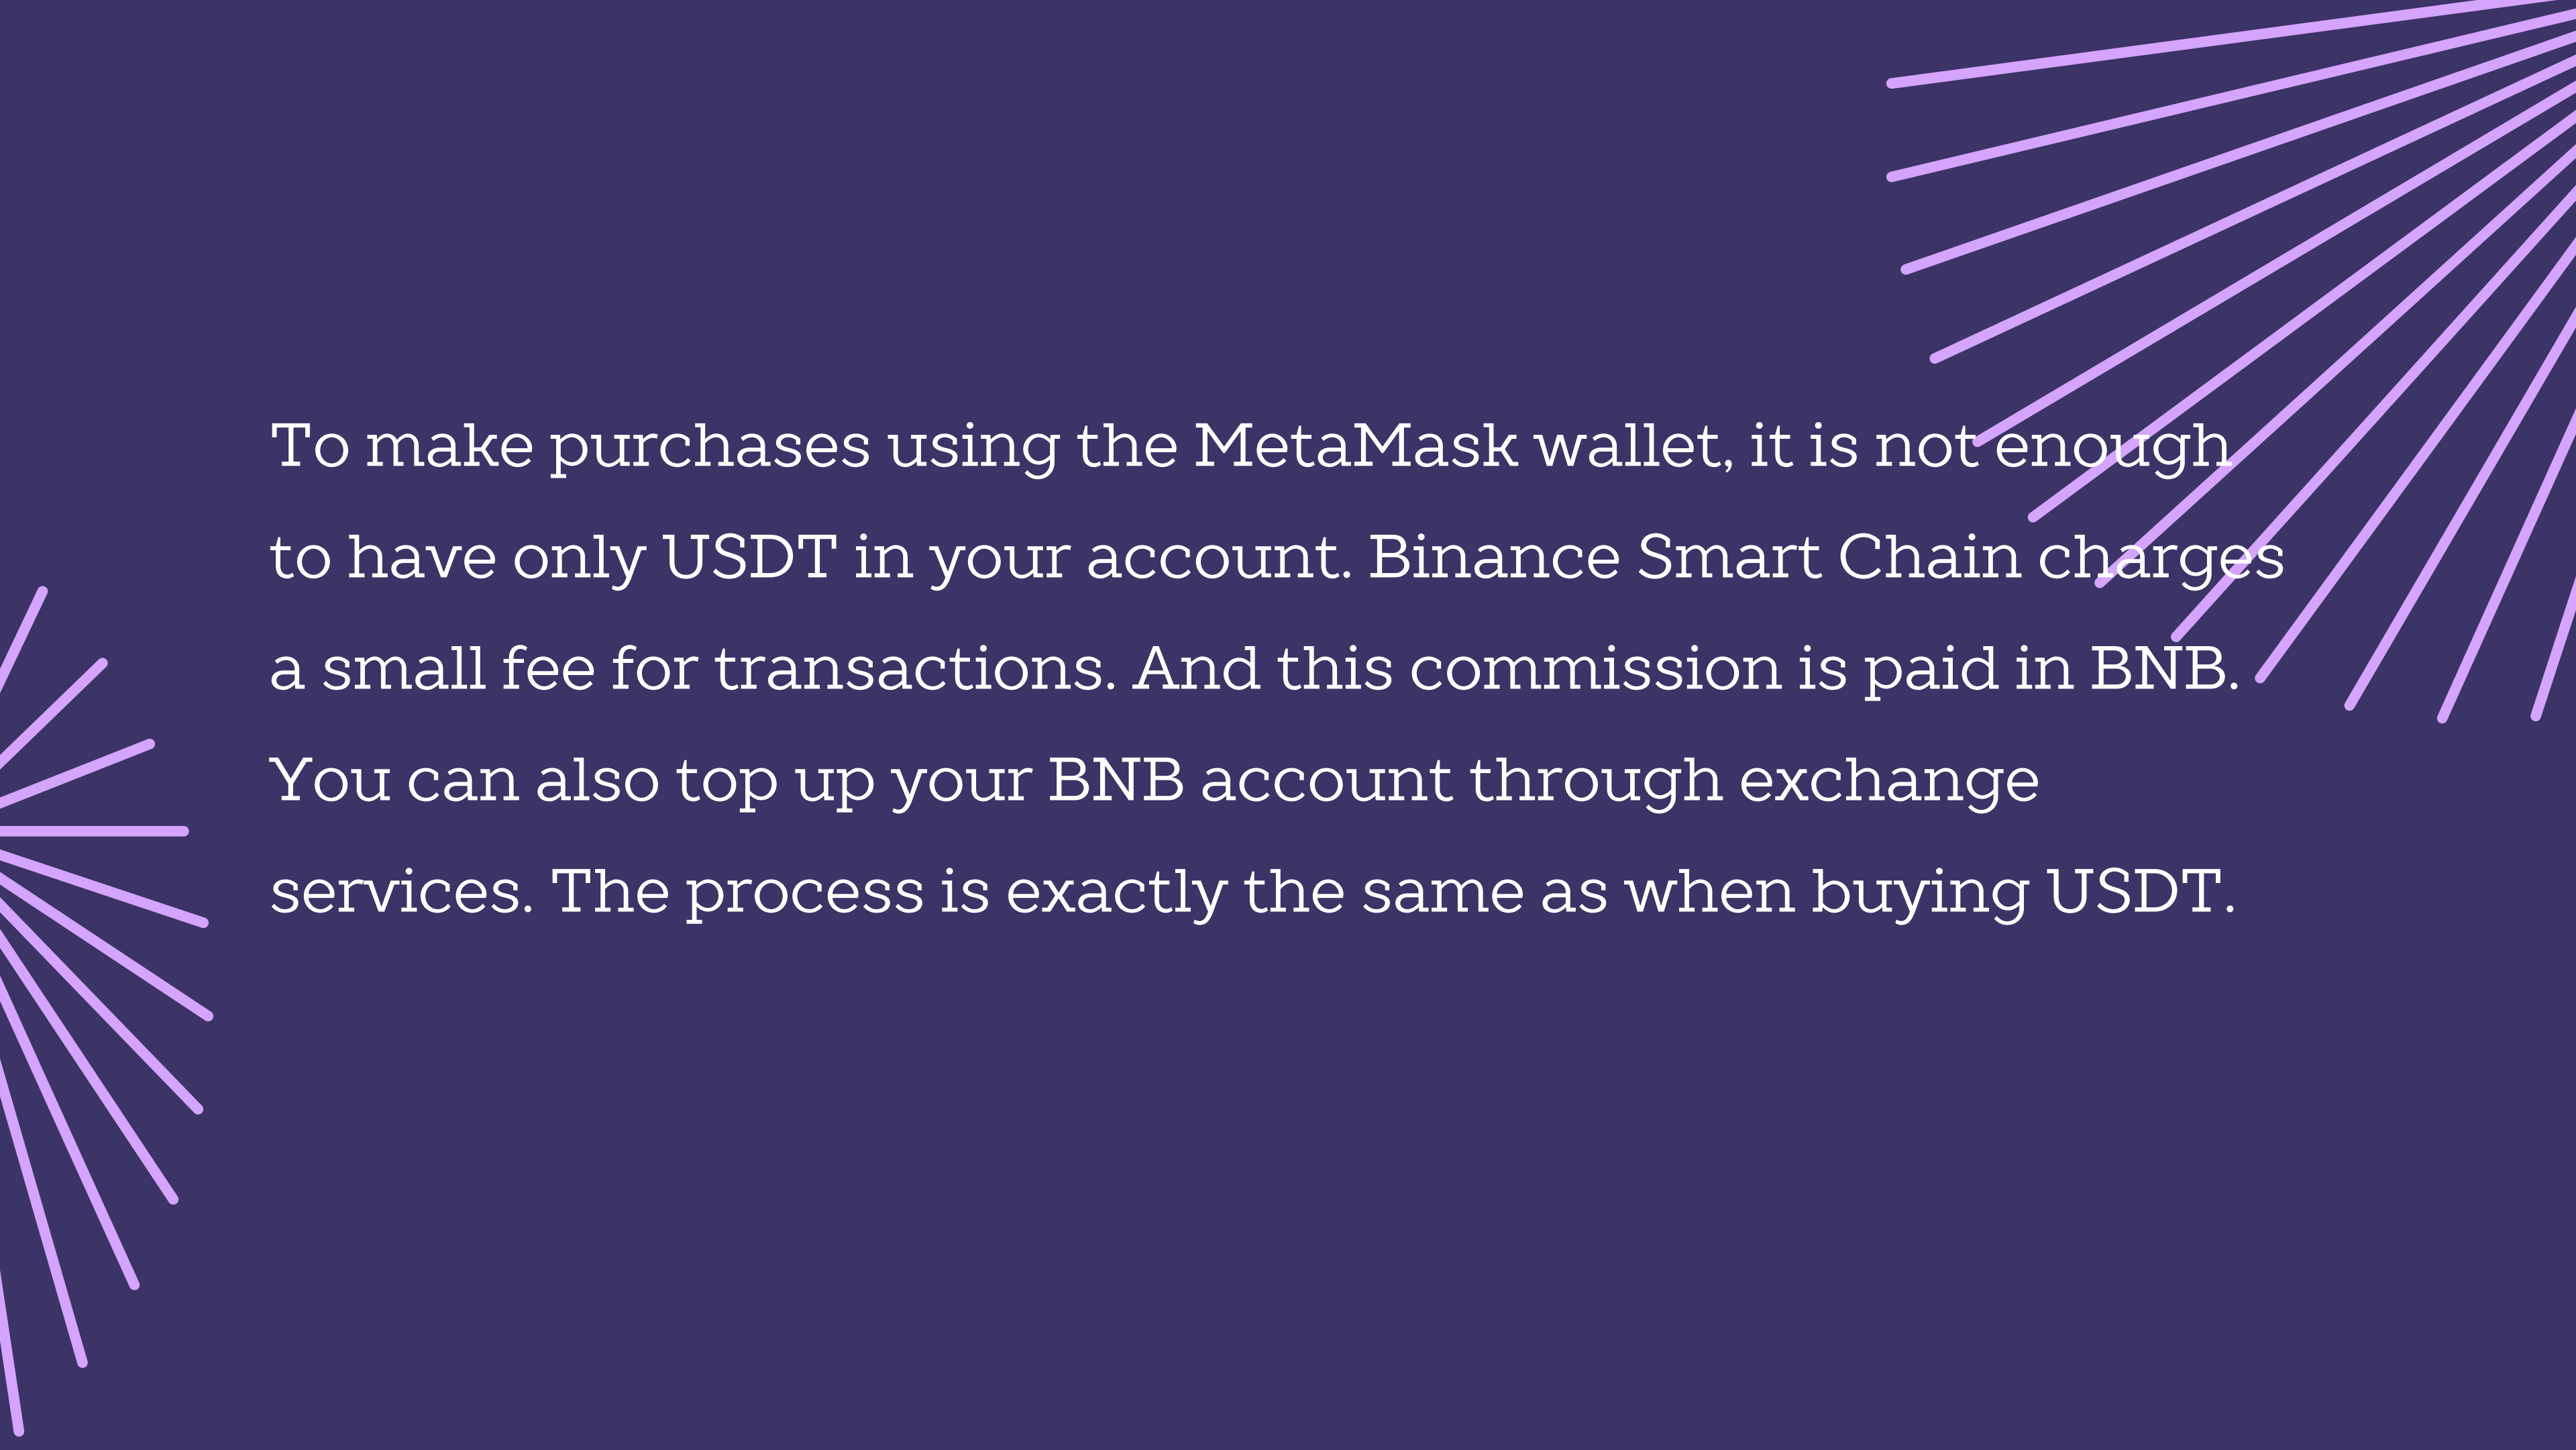

In the first column, we choose what we will buy cryptocurrency for and in what way.

In the second, we select what we want to buy – Tether BEP 20 – this is the name for USDT on the Binance Smart Chain network.

Select the most suitable exchanger from the list that opens. When choosing an exchanger, pay attention to the conditions that this exchanger has; the course it offers; limits – does your amount fit into them; amount of currency in reserve – does the exchanger have as much currency as you need; number of positive and negative reviews.

Go to the selected exchanger. We fill in all the necessary data. We check that we have entered all the data correctly and proceed to payment.

After successful payment, you will have to wait until the exchanger transfers the cryptocurrency to your wallet. All exchangers have different conditions regarding processing time. But usually this happens within a couple of minutes.

To make purchases using the MetaMask wallet, it is not enough to have only USDT in your account. Binance Smart Chain charges a small fee for transactions. And this commission is paid in BNB. You can also top up your BNB account through exchange services. The process is exactly the same as when buying USDT.

How to withdraw money from MetaMask.

Go to the website www.bestchange.com

In the first column, we choose which cryptocurrency we will sell.

In the second, we choose for what currency and in what way we want to sell the cryptocurrency.

From the list that opens, select the most suitable exchanger.

We fill in all the necessary data. We make payments from the MetaMask wallet.
